Example of isolated boundaries Various representation schemes have been designed and developed, with the above properties in mind, to create solid models of real objects. Nine schemes can be identified.

and the theory behind decomposition of modelling operations into sequences of Euler operators. Chapter 5 describes variations on the basic datastructure, the non-manifold, degenerate, and partial object representations. Chapter 6 describes several modelling algorithms for manipulating B-rep models, including modelling with degenerate models.

Boundary Representation Modelling Techniques

Boundary representation is the principle solid modelling method used in modern CAD/CAM systems. There have been a long series of developments on which currently available systems are based, full details of which are only partially known.
